

Healthy Sexuality and Harm Reduction /Street Connections

DRUG CHECKING SERVICE QUARTERLY REPORT – JULY 2025

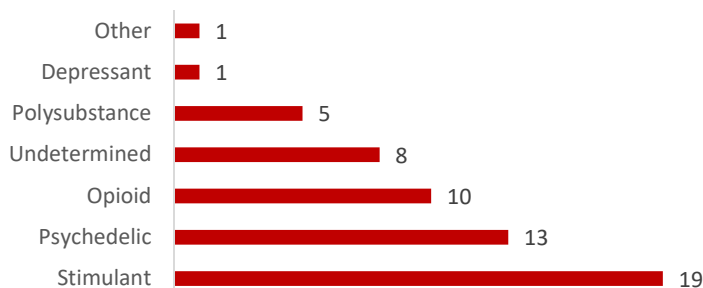

Healthy Sexuality and Harm Reduction/Street Connections delivers drug checking service in Winnipeg, MB. This free and confidential service provides information on the composition of substances and harm reduction information. **Drug checking assists community members in identifying contaminants and taking steps to reduce harm from potent or unexpected drugs.**

- 57 samples were tested in April-June 2025.
- Most of the samples tested contained stimulants (33%) or psychedelics (23%). However, several samples (9%) contained complex polysubstances.
- Fentanyl/fentanyl analogs and benzodiazepine/benzo analogs were found in most samples, expected to be “down.”
- Our technologies could not detect psychoactive components in some samples (named as undetermined in the graph below). This does not mean that there was nothing active in the sample. It could mean that there was something present at a very low concentration. Some substances can be very strong even at low doses.
- Five public health notifications/drug alerts were issued in this period.

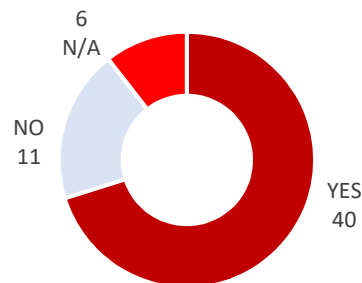

Results

Note: Results from FTIR, test strips, and Health Canada’s Drug Analysis Service confirmatory tests*

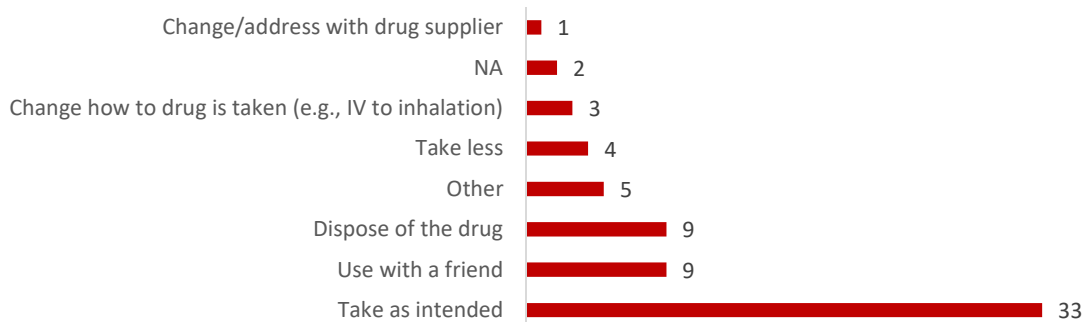

Expected Results

Note: A number of samples contained substances that were “unknown” to the service user (e.g., sample found or given), explaining why there is a “not applicable” category in the graph below.

Stimulant	Opioid	Psychedelic	Depressant	Polysubstance	Other
Methamphetamine, cocaine, crack cocaine	*Down, heroin, fentanyl (unregulated opioids), and pharmaceutical opioids	MDMA and related, 2-C family, ketamine	Benzodiazepines	Cross-category mixture	Testosterone, health supplement, erectile dysfunction medication, anti-inflammatory medication

Intended Actions upon Receiving Results

Public Health Notification/Drug Alerts Issued
